

JFO – Testsuite

RTF to XSL-FO conversion

Pictures

An RTF document may contain images of following formats:

- JPG
- PNG
- WMF
- EMF

Other formats (e.g. GIF) are converted by RTF editor (e.g. MS Word) when the document is written to file. JFO handles all mentioned formats. Since WMF and EMF are not supported by most (all?) XSL-FO renderers JFO has an interface to embed image transcoders. A simple Java based transcoder is included in JFOs distribution. (See extension directory).

Below is free positioned WMF from Microsofts Clipart Gallery
